# REDEFINING WHAT'S POSSIBLE IN COLOUR MATCHING.

Better colour management with Genius iQ and Standwin iQ software.

Using cutting-edge technology and advanced design, the all new Genius iQ spectrophotometer sets new standards for colour matching. In combination with innovative Standwin iQ software and using a Wi-Fi connection, it gives you better results – faster and more conveniently than ever.

## German state of the art technology.

Thanks to its new, cutting-edge technology, including the reliable 3-angle measurement technique for colour and effect, the Genius iQ is supremely fast and accurate. Along with Standwin iQ software, it uses over 200,000 constantly updated formulas to give you precise matches every time. It even automatically shades the colour so you get a complete formula in one go.

## Wi-Fi connection.

Using Wi-Fi, the Genius iQ instantly shares colour data to whoever needs it in your team – whether they're using a desktop, laptop, tablet or even smartphone. Workflow time can be dramatically reduced as measurements can be sent directly from the device to the mixing room.

## Innovative design.

Much smaller and lighter than previous models, the Genius iQ is easy to use. Bright screens and clear icons make it incredibly intuitive and it takes hardly any training to get up and running. Colour coded LEDs also give instant feedback on the device's status so you're always in complete control.

The full-colour, hi-res touch screen and the LED indicators give direct status feedback while measuring colour and effect in one go.

The docking station cradle means your Genius iQ is always charged and as the device is wireless it can be kept anywhere in the bodyshop.
